REFERENCE

Effective Proteins

Todos los valores son por 100 g de alimento cocido o preparado, salvo donde se indica. Úsala como referencia rápida — no como una regla rígida.

Food	Serving	Protein	kcal	Note
Cooked chicken breast	100 g	31 g	165 kcal	Most efficient per calorie
Chicken thigh (skinless)	100 g	26 g	209 kcal	More fat, equally valid
Cooked turkey breast	100 g	30 g	189 kcal	Almost identical to chicken
Cooked beef	100 g	29 g	250 kcal	High in iron
Cooked pork loin	100 g	27 g	185 kcal	Lean cut, underrated
Cooked pork chop	100 g	25 g	231 kcal	Varies by cut
Cooked salmon	100 g	25 g	208 kcal	High in omega-3
Canned tuna (in water)	100 g	25 g	116 kcal	Convenient, no cooking needed
Cooked fresh tuna	100 g	29 g	184 kcal	Similar protein to beef
Cooked tilapia	100 g	26 g	128 kcal	Economical and lean option
Canned sardines	100 g	22 g	208 kcal	Omega-3 + calcium

Food	Serving	Protein	kcal	Note
Cooked shrimp	100 g	24 g	99 kcal	Very low in fat
2 whole hard-boiled eggs	~100 g	12 g	155 kcal	With yolk = complete nutrients
3 egg whites	~90 g	11 g	52 kcal	Fat-free, pure protein
Greek yogurt (0% fat)	170 g	17 g	100 kcal	Double strained = more protein
Cottage cheese	113 g	14 g	110 kcal	Very versatile, underrated
Mozzarella cheese	85 g	18 g	200 kcal	—
Ricotta cheese	124 g	14 g	216 kcal	—
Cooked edamame	100 g	11 g	121 kcal	Most protein-rich legume
Tempeh	100 g	19 g	193 kcal	Fermented, more than tofu
Firm tofu	100 g	8 g	76 kcal	Absorbs seasoning
Cooked lentils	100 g	9 g	116 kcal	Also provides carbohydrate
Cooked chickpeas	100 g	9 g	164 kcal	Also provides carbohydrate
Cooked black beans	100 g	9 g	132 kcal	Also provides carbohydrate
Protein en polvo (whey)	1 scoop ~30 g	22–25 g	~120 kcal	Varies by brand
Protein en polvo (vegetal)	1 scoop ~30 g	18–22 g	~110 kcal	Pea, rice, hemp

HOW TO USE IT

How to Hit Your Protein Goal

La proteína no tiene que venir de una sola fuente ni de una sola comida. Distribuye bien y llegas sin esfuerzo.

Active person	0.8–1 g × body weight in lbs	<i>Ex: 130 lb → 104–130 g/day</i>
Intense training	1–1.2 g × body weight in lbs	<i>Ex: 185 lb → 185–222 g/day</i>

Spread across 3–4 meals

Don't try to fit it all in one meal. 30–40 g per meal is what the body can use efficiently.

Combine sources

Animal + plant-based in the same day gives you a more complete amino acid profile and more variety.

Post-workout is key

Within 60–90 minutes after training your body uses protein most efficiently. Don't skip it.

Use your palm as a guide

1 open palm ≈ 3–4 oz ≈ 20–28 g of protein. Apply it at any restaurant or someone else's kitchen.

Hydration goes hand in hand

Higher protein intake requires more water. Aim for half your body weight in pounds as ounces of water per day.

It's not just about protein

Protein works best with enough rest, strength training and adequate total calories.
